Art Unit: 2834

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-3, 5, 8-11, 13 and 16 are rejected under 35 U.S.C. 102(a) as being anticipated by Pla, Calabro or Baz.

Each reference teaches a damping system including unwanted oscillations, sensors to detect the oscillations, a feedback loop, phase shifter or inverter and drive electronics to provide piezoelectric actuators with signals appropriate to damp the unwanted oscillations. Note especially fig. 1 of Pla, figs. 1-3 of Calabro and figs. 3 & 29-34 of Baz.

Claims 4, 6, 7, 12, 14 and 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Further cited to show damping systems using piezo elements are Sasaki, Rastegar, Crawley, Nye and Geohegan.
